A Table shewing at what hour and minute the Moon cometh to the South, and also how long she Shineth.

In the Fifth Column of the *Almanack*, you have the Age of the Moon against every day in the year. By help whereof and this little Table, you may nearly find,

I. *How many hours and minutes the Moon Shineth.*

II. *At what hour and minute she will be just South.*

III. *At what hour and minute she Rises and Sets.*

IV. *The hour of the Night, by the Shadow of the Moon upon a Sun-dial.* By the Directions following.

I. To find how long the Moon ſhineth.

Example. On the 13 *March* I would know how long the Moon Shineth. The Moon that day is 6 days old: wherefore find 6 in the firſt Column of this Table, and againſt it you ſhall find 4 h. 48 m and ſo long doth the M. ſhine

II. To find the time of the Moons coming to the South.

Example, Upon the 17 of *March*, the Moon being 10 days old: Look for 10 days in the third Column of the Table, and againſt it in the fourth Column you ſhall find 8 h. 00 m ſo that the Moon will be South at 8 a Clock at Night.

III. To find the time of the Moons Riſing and Setting.

1 If the Moon be leſs than 15 days old, add the time of her Shining to the time of the Suns Riſing, and the Sum will be the time of the Moons Riſing.

2. If the Moon be above 15 days old, take the quantity of her Shining from the time of the Suns Riſing, and the remainer will be the time of the M. Riſing.

For the Moons Setting.

1. If the Moon be leſs than 15 days old, add the time of her Shining to the time of the Suns ſetting, and the Sum ſhall be the time of the Moons Riſing.

2. If the Moon be above 15 days old, Subſtract the Shining from the Sun-ſetting, adding 12 hours if need be, and the remainer ſhall be the time of the Moons Setting; *March* 29, the M. will Riſe at 10 h. 49 m and Set at 11 h.

To find the hour of the Night by the Moons Shadow on a Sun-dial.

Find at what time the Moon comes to the South as before, which known, mark how much the Shadow upon the Dial wants of 12, which take from the time of the Moons coming to the South, the remainer is the hour of the night. But if the Shadow be paſt 12, add thoſe hours to the coming to the South, and the Sum is the hour of the night.

Example. Upon the 19 of *April*, the Moon being 13 day old, and comes to the South at 20 h. 24 m. and that night I find the Shadow at 9 h. 30 m. which wants 2 h. and a half of 12, wherefore take 2 h. 30 m. from 10 h. 24 m. and there will remain 7 h. 54 m. for the hour of the night —— But if the Shadow had been 2 h. 30 m. after 12, thoſe added to 10 h. 24 m would make 12 h. 54. m. for the hour of the night.
